

## [BECSys Technical Data Portal](#)

**BECS Technology, Inc.** is proud to announce the creation of the **BECSys Technical Data Portal**. This portal provides online access to all of the technical data files needed to specify, design, and support BECSys products.

Designers, consultants, and engineers no longer need to manage binders or CDs full of Specifications, Line Drawings, Data Sheets, etc. All of this information, and more, is available through this new BECSys Technical Data Portal, assuring that the most current version of all documentation is always available.

An online account is easy to establish. Simply visit the BECS website ([www.becs.com](http://www.becs.com)), go to the **Aquatics Products** page, and click on **Login Request** - complete the simple on-screen application, and click Send. This will send an email to BECS Technology requesting a new online account. After review and approval, the username and password will be returned to the email provided. There are no fees associated with this service.

Once the account is established, you may login by clicking the **LogIn** link at the bottom right-hand corner of any page on BECS' website. You will be prompted for your username and password. Once logged-in, you will have a new item **Technical Data** available in both the top and bottom menu bars. Click on the **Technical Data** option to access the BECSys Technical Data Portal.

BECS Technology is committed to not only making *reliable* products, but also products that are easy to use. The new BECSys Technical Data Portal extends that philosophy to those that specify, design, and support our products by making the most current information easily available to those that need it. We know this will be a valuable resource, and are pleased to offer this to our valued partners in the industry.
