

Advanced Electronic Alarm Notification

BECS Technology, Inc. is pleased to announce the incorporation of **Email** and **SMS Text Message Alarm Notification** capabilities to the BECSys5, BECSys7, and BECSysBW controllers. These capabilities, along with an integral Ethernet port, are now a **standard** feature of these controllers.

With the addition of an optional 56k data/fax modem, the BECSys5, BECSys7 and BECSysBW can also provide remote Alarm Notification by **Fax** and/or to **Numeric Pagers**.

These alarm notification capabilities provide operators, maintenance, service, and management personnel the most flexible set of options for closely monitoring the water quality of their pools. This is a valuable enhancement over numeric pager and pre-recorded voice alarm notifications, as individuals managing multiple pools will immediately know which pool is in alarm, and the details of that alarm.

Up to 8 recipients can be notified of alarms, and each recipient can be independently configured for any of the alarm notification formats. For example, the service individual can be setup to receive a **Text Message**, while the management office can be setup to receive a **Fax**.

For current BECSys controller installations, these features can be incorporated as a simple upgrade to existing equipment.

For more information, please contact the distributor in your area. For help finding a distributor, contact the appropriate individual listed below.

About BECS Technology

BECS Technology, Inc. is a diversified design, engineering, manufacturing, and service firm dedicated to providing innovative and reliable solutions to the Aquatics, Agriculture, Refrigeration, and Library Automation markets. In the Aquatics market, BECS specializes in water chemistry and automated filter backwash controls. Products are designed and manufactured at the company's plant located in Saint Louis, Missouri, USA. Please visit www.becs.com for more information.
