

[BEC'Sys Now! - App for Android and iPhone](#)

BECS Technology continues to expand its industry-leading water chemistry controller connectivity options with the introduction of the **BECSys Now!** App for Android and iPhone, the first (and only) smartphone App in the commercial controller market. There is no charge for the App.

[BECSys Now!](#) provides an easy way for pool owners and operators to monitor the status of their BECSys Controllers from the convenience of their handheld device. The **BECSys Now!** App was designed to be easy to use so that busy pool operators and managers can quickly check the status of their pools at any time.

A BECSys controller is added to the App simply by entering its IP Address. **BECSys Now!** will establish a connection with the controller, download some identifying information, and add it to the Controllers list. Any controller in an Alarm condition is indicated with a red exclamation point icon and moved to the top of the list.

Details on current Readings and Alarms are visible by tapping on any controller in the list. The user can easily configure which Readings are displayed in the App.

"Smartphones and iPhones have become an integral part of everyday life. Today's generation of pool operators expect to be able to monitor their pools that way too." said BECS Technology President Brett Steinbrueck. "It is always important for us as an organization to listen to our customers and respond with solutions that exceed their expectations."

BECSys Now! complements the existing industry-leading connectivity capabilities of the BECSys controller line such as standard 100BaseT Ethernet, Wi-Fi, BECSys for Windows PC software, Email and Text Message Alarm Notifications and MODBUS protocol.

Android users can download the **BECSys Now!** App from [Google Play](#). iPhone and iPod Touch users can download it from the [Apple App Store](#). Search for **BECSys** in either to quickly find the **BECSys Now!** App. Best of all, it's free!

About BECS Technology

BECS Technology, Inc. has been designing and manufacturing the industry's most reliable and innovative water chemistry and automated filtration controllers for over 25 years. All systems are designed and manufactured in-house at the company's plant located in Saint Louis, Missouri, USA. Visit www.becs.com for more information.
